Bildungshaus Zeppelin & Steinberg
Zeppelinstraße 7, 38640 Goslar

Begin: Friday, 22 November 2024, 15:00 h !!!

End: Sunday, 24 November 2024, 14:00 h

Language: English

Registration deadline: 14 November 2024

Registration at: www.stube-niedersachsen.de

“Sustainable resource management is about responsibly balancing the use of natural resources to meet current needs while preserving them for future generations”, says the United Nations Economic Commission for Europe (UNECE). In this seminar, we will discuss current global challenges in this field and approaches for dealing with them.

We will visit a company that runs a recycling plant for electronic waste, which not only contributes to saving natural resources but has also been accredited for its high operational standards.

Another highlight will be a guided tour of the UNESCO world heritage site of Rammelsberg with its long history of mining from the Bronze Age until 1988, where we will walk through underground galleries and learn how mining technology and miners’ working conditions changed over the centuries.

Lead facilitator:

Andreas Kurschat – Programme manager of STUBE Niedersachsen at the KED

Main speakers:

Prof. Dr.-Ing. Daniel Goldmann – Researcher and institute manager at TU Clausthal

Felix Kolbe – CEO purchasing and sales at MPM Environment Intelligence GmbH

One week before the event, we will inform you by e-mail if you can participate.

A certificate of participation will be issued at the end of the seminar.
